**Is Early Intervention in Psychosis Cost-Effective Over the Long Term?**

Cathrine Mihalopoulos, Meredith Harris, Lisa Henry, Susy Harrigan, and Patrick McGorry

*Schizophrenia Bulletin*. 2009;35:909-918.

Under Table 4, there should be a note reading:

The inpatient figures in Table 4 only include acute specialist services, child and adolescent acute service, extended care adult, community care, and residential rehabilitation. Adult acute services, which are the largest cost category, were excluded here as a sensitivity analysis. The inclusion of adult acute services increases the inpatient cost for the control group to a total cost of \$62,990 (\$56,669 discounted) and for EPPIC the total costs are \$14,315 (\$13,048 discounted). The costs in table 3 include all inpatient facilities.
