Biography

Yuan-Fang Li is a Senior Lecturer in the Department of Data Science & Artificial Intelligence (DS+AI), Faculty of Information Technology, Monash University. Yuan-Fang's research interests include knowledge graphs, ontology reasoning & knowledge representation, natural language processing, representation learning (embedding) of networks/graphs. Some of the research problems he works on include:

- Structural & temporal learning for hospital readmission risk prediction.
- Question generation from text & knowledge graphs.
- Complex question answering over knowledge graphs.
- Learning to improve ontology reasoning efficiency.
- Intuitive & scalable visualisation of non-hierarchy associations in large ontologies.

Qualifications

- Computer Science, Doctor of Philosophy, National University of Singapore
  Award Date: 18 Dec 2006
- Computer Science, Bachelor of Computing (Honours), National University of Singapore
  Award Date: 7 Aug 2002

Research output

**Semisupervised network embedding with differentiable deep quantization**

**Generalized pyramid co-attention with learnable aggregation net for video question answering**

**Multi-level, multi-modal interactions for visual question answering over text in images**

**Combining cross-modal knowledge transfer and semi-supervised learning for speech emotion recognition**

**Boosting house price predictions using geo-spatial network embedding**

**Multimodal feature-wise co-attention method for visual question answering**
Code2Que: a tool for improving question titles from mined code snippets in Stack Overflow

Adaptive knowledge-enhanced Bayesian meta-learning for few-shot event detection

Curriculum-meta learning for order-robust continual relation extraction

Exploiting scene graphs for Human-Object Interaction detection

Improving numerical reasoning skills in the modular approach for complex question answering on text

Key factors influencing retail store expansion decisions: case study of combining evidence- and data- driven approach

Multi-scale contrastive siamese networks for self-supervised graph representation learning

Towards balanced defect prediction with better information propagation

XL-Sum: large-scale multilingual abstractive summarization for 44 languages

Less is more: data-efficient complex question answering over knowledge bases

MedGraph: structural and temporal representation learning of electronic medical records

Towards meta-reasoning for ontologies: a roadmap
Understanding and improving ontology reasoning efficiency through learning and ranking

OntoPlot: a novel visualisation for non-hierarchical associations in large ontologies

A general-purpose visual query language for knowledge graphs with bidirectional transformations

Few-shot complex knowledge base question answering via meta reinforcement learning

Gaussian embedding of large-scale attributed graphs

Generating question titles for Stack Overflow from mined code snippets

Knowledge-enriched, type-constrained and grammar-guided question generation over knowledge bases

Learning from the scene and borrowing from the rich: tackling the long tail in scene graph generation

Retrieve, program, repeat: complex knowledge base question answering via alternate meta-learning

Robust Attribute and Structure preserving graph Embedding

SNEQ: semi-supervised attributed network embedding with attention-based quantisation
Towards generating thread-safe classes automatically

Understanding unnatural questions improves reasoning over text

Vocabulary matters: a simple yet effective approach to paragraph-level question generation

A survey on the use of access permission-based specifications for program verification

Vector and line quantization for billion-scale similarity search on GPUs

Difficulty-controllable multi-hop question generation from knowledge graphs

Footprints of fitness functions in Search-Based Software Testing

One network for multi-domains: domain adaptive hashing with intersectant generative adversarial networks

ParaQG: a system for generating questions and answers from paragraphs

Putting the horse before the cart: a generator-evaluator framework for question generation from text

RobustiQ: a robust ANN search method for billion-scale similarity search on GPUs
Artificial Intelligence (AAAI), 8 p.

Explicit query interpretation and diversification for context-driven concept search across ontologies

Factors of collective intelligence: How smart are agent collectives?

How can reasoner performance of ABox intensive ontologies be predicted?

Predicting energy consumption of ontology reasoning over mobile devices

Preface

The ubiquitous semantic web: Promises, progress and challenges

The ubiquitous semantic web: Promises, progress and challenges

BOWL: augmenting the Semantic Web with beliefs

Capturing researcher expertise through MeSH classification

Context-driven concept search across web ontologies using keyword queries
Event and strategy analytics

FFD-index: An efficient indexing scheme for star subgraph matching on large RDF graphs

Grass: An efficient method for RDF subgraph matching

Observation, communication and intelligence in agent-based systems

R₂O₂: An efficient ranking-based reasoner for OWL ontologies

A meta-reasoner to rule them all: Automated selection of OWL reasoners based on efficiency

Event analytics

How long will it take? Accurate prediction of ontology reasoning performance

The mobile semantic web

The ubiquitous semantic web: Promises, progress and challenges

Towards a consistent feature model using OWL

Two decades of Web application testing: A survey of recent advances

An ontology-centric architecture for extensible scientific data management systems
Enriching concept search across semantic web ontologies

Visualization of large ontologies with landmarks

A rigorous characterization of classification performance: A tale of four reasoners

Knowledge enrichment analysis for human tissue-specific genes uncover new biological insights

Predicting reasoning performance using ontology metrics

Integrating software engineering data using semantic web technologies

Using semantic web technologies to build a community-driven knowledge curation platform for the skeletal dysplasia domain

Scale-out RDF molecule store for efficient, scalable data integration and querying

Discovering anomalies in semantic web rules

Measuring design complexity of semantic web ontologies

PODD - Towards an extensible, domain-agnostic scientific data management system
PODD: An ontology-driven data repository for collaborative phenomics research

Proceedings of the ACM International Conference on Digital Libraries: Message from the program chairs

Towards a semantic & domain-agnostic scientific data management system

Verifying semistructured data normalization using SWRL

An integrated formal approach to semantic work environments design

Correctness criteria for normalization of semistructured data

Enhancing semantic web services with inheritance

Scalable semantics - The silver lining of cloud computing

Extended abstract: Towards verifying semistructured data

Belief-augmented OWL (BOWL) - Engineering the semantic web with beliefs

Verifying feature models using OWL

A Z approach in validating ORA-SS data models

Reasoning about ORA-SS data models using the semantic web
Research into verifying semistructured data

Semantic web languages - Towards an institutional perspective

Validating semistructured data using OWL

Institution morphisms for relating OWL and Z

TCOZ approach to OWL-s process model design

A tools environment for developing and reasoning about ontologies

Formal semantics and verification for feature modeling

Soundness proof of Z semantics of OWL using institutions

Verify feature models using Protege-OWL

Verifying OWL and ORL ontologies in PVS

Visualizing and simulating semantic web services ontologies

TCOZ approach to semantic web services design
A combined approach to checking web ontologies

Verifying DAML+OIL and beyond in Z/EVES

XML-based static type checking and dynamic visualization for TCOZ

Prizes
Best Student Paper Award
Li, Yuan-Fang (Recipient), Jan 2020

Kurzweil Best Paper Prize
Li, Yuan-Fang (Recipient), 2017

President’s Graduate Fellowship Scholarship
Li, Yuan-Fang (Recipient), 2005

Singapore Millennium Foundation Scholarship
Li, Yuan-Fang (Recipient), 2004
